DETAILED ACTION

In view of the Pre-Appeal Conference Decision filed on 2/25/09, PROSECUTION IS HEREBY REOPENED. A new ground of rejection is set forth below.

To avoid abandonment of the application, appellant must exercise one of the following two options:

(1) file a reply under 37 CFR 1.111 (if this Office action is non-final) or a reply under 37 CFR 1.113 (if this Office action is final); or,

(2) request reinstatement of the appeal.

If reinstatement of the appeal is requested, such request must be accompanied by a supplemental appeal brief, but no new amendments, affidavits (37 CFR 1.130, 1.131 or 1.132) or other evidence are permitted. See 37 CFR 1.193(b)(2).

Claim Rejections - 35 USC § 112

The following is a quotation of the second paragraph of 35 U.S.C. 112:

The specification shall conclude with one or more claims particularly pointing out and distinctly claiming the subject matter which the applicant regards as his invention.

Claims 1-38 are rejected under 35 U.S.C. 112, second paragraph, as being indefinite for failing to particularly point out and distinctly claim the subject matter which applicant regards as the invention.

Independent claims recite in part: "...managing said optical communication path for the user ***without exposing*** the network topological information to the user, whereby the user need not have the network topological information in order to obtain a new

optical communication path." The only area of support provided by Applicant was page 22, lines 14-22 which recites:

"The hybrid/proxy architecture is similar to the distributed flooding architecture, and therefore has many of the same advantageous and disadvantageous characteristics as the distributed flooding architecture. However, because the OSS rather than the OSA-N floods the advertisement, the OSS does not need to **"leak"** topological information to the OSA-enabled user. Therefore, there is no confusion of the separation between the NNI and the UNI."

It is clear from the disclosure that by not **exposing**, the network topological information is in fact not **leaked** to users. The term "leak" implies that something is unintentionally disclosed or unauthorized.

The claimed limitation is unclear because it implies that no topological information is exposed to the user at all (regardless of whether he or she is authorized or unauthorized), whereas the specification implies that only authorized users can see the topological information. A clarification is requested.
